COREY ITALIANO

Idaho Falls, Idaho | 208-760-9280 | paisanitaliano@gmail.com | corey-italiano.com/portfolio

SUMMARY

Artificial intelligence (AI) systems technical professional who designs, builds, and operates agentic AI and automation solutions end to end — from proof of concept through production use, monitoring, and continuous improvement. Built and run a hybrid local-and-cloud AI orchestrator in Python and FastAPI integrating the Anthropic, OpenAI, and Google Workspace APIs (application programming interfaces), and shipped a TypeScript mobile application to both the iOS App Store and Google Play through agentic development. Independently published author of two novels with the third in the series in review and a stand-alone novel in progress, and engineer of 24.5 hours of finished audiobook audio. Backed by over ten years as a smart home and low-voltage systems technician across 7,000+ installations and service calls, where the daily work was translating complex system behavior into language non-technical people could act on. Based in Idaho Falls, Idaho. U.S. citizen, eligible to obtain and maintain a federal security clearance.

CORE SKILLS

AI & Automation: Agentic AI solution design and deployment · AI-enabled workflow automation · Local and offline large language model (LLM) deployment · Model routing and orchestration · Prompt engineering and specification design · Model output evaluation · Solution lifecycle ownership from proof of concept to production

Technical: Python · FastAPI · REST API integration (Anthropic, OpenAI, Google Drive and Docs) · Vector stores and retrieval · Pytest · Git and GitHub · TypeScript · HTML and CSS · macOS and Linux · Smart home and Internet of Things (IoT) systems · Network troubleshooting

Documentation & Training: Technical documentation · Installation and service manuals · Procedural and step-by-step writing · Knowledge base content · Plain-language translation of technical concepts for non-technical audiences · Field technician training and onboarding · Long-form authorship and editing

Domain Expertise: Residential security and home automation systems · Low-voltage installation and field service operations · Network and wireless mesh troubleshooting · Long-form fiction writing and narrative craft — subject depth for technical evaluation and domain-expert review work

Media & Process: Adobe Photoshop · Audacity (audio restoration and mastering) · Filmora (video production) · Reproducible and auditable AI output specification · Requirements gathering and process mapping · Compliance and deadline management

AI & AUTOMATION PROJECTS

Liam — Hybrid Local and Cloud AI Orchestrator (Python, FastAPI)

- Designed, built, and operate a production orchestrator that routes each request between a locally hosted model and the Anthropic and OpenAI APIs based on whether the work is sensitive, offline-required, or heavy enough to justify a cloud call.
- Built the memory layer: a vector store paired with a shared structured reference governing terminology and style, so every model in the system returns consistent output.
- Integrated the Google Drive and Docs APIs with OAuth scope management — documents mirror to a local cache for low-latency reads, and dictated edits apply as targeted in-place replacements rather than whole-file overwrites, reporting and changing nothing when a match is ambiguous.
- Built offline voice I/O with whisper.cpp and Piper and trained a custom wake-word model with openWakeWord, running as an isolated background process.
- Wrote and maintain a pytest suite covering the specific paths that have actually broken in real use — filename matching, document parsing, authentication, reading-session state — as a guard against regressing those incidents rather than as a coverage target.
- Reachable from desktop, Telegram, and phone over HTTPS via Tailscale — one backend behind all three, not three separate builds.

The Dova Sku Series Companion — iOS and Android (TypeScript)

- Shipped and maintain a mobile application published on both the Apple App Store and Google Play, developed through GitHub and agentic development: scoping work, reviewing output, iterating on failures, and managing version control and releases.
- Carried the application and a companion web property through platform review and multiple release cycles, resolving structural, accessibility, and cross-browser defects.

Prompt Specification System — Reproducible and Auditable Output

- Developed a documented, versioned specification with a fixed field order that holds generated output consistent across hundreds of generations — built specifically so results are reproducible and traceable to the specification that produced them, rather than dependent on re-running until something works.
- Addresses the same drift and auditability problem organizations face when deploying generative tooling at scale.

AI-Assisted Writing Pipeline

- Integrated AI tooling into a long-form fiction workflow across four books, including editing support and continuity checking against an established canon. Maintain a written canon reference that constrains model output to series-consistent terminology and description.

Content Automation Pipeline for Social Media Marketing (in development)

- Designing an end-to-end generation pipeline with a mandatory human approval gate before any output publishes, with production time per unit baselined before automation so the result is measurable rather than anecdotal.

PROFESSIONAL EXPERIENCE

Smart Home Pro
Vivint Inc. | *August 2020 – Present* | *Boise, Idaho through September 2026; Idaho Falls, Idaho since October 2026*

- Averaged 12 installations and 15 service and upgrade tickets per week — 27 completed jobs weekly — totaling 7,000+ completed installations and service calls.
- Diagnosed and resolved complex system faults spanning security panels, cameras, sensors, thermostats, smart locks, network connectivity, and wireless mesh performance.
- Translated technical system behavior into plain-language explanations for homeowners with no technical background on every installation — scoping an ambiguous complaint into a diagnosis and a fix the customer could act on.
- Trained and onboarded new field technicians on installation procedure, product configuration, and troubleshooting methodology.
- Maintained weekly inventory counts on an on-hand stock valued between $50,000 and $100,000.
- Contributed to establishing a new full-time Boise office, helping build out field operations in a market with no existing local team.

Author, AI Systems Builder & Content Producer
Imaginarium Italiano — Self-employed | *January 2023 – Present*

- Built and run the AI and automation systems described above, in support of an independent publishing and marketing operation.
- Wrote and published two science fiction novels, with a third in review and a stand-alone novel in draft.
- Engineered 24.5 hours of finished audiobook audio from raw recording through publication-ready master.
- Produced and scripted multi-platform video content for TikTok, Instagram Reels, and Facebook, running an AI-assisted production pipeline end to end from script through published asset.

Sales & Installation
ShadeWorks — Boise, Idaho | *May 2018 – August 2020*

- Installed patio cover and pergola systems from site assessment through build completion; promoted into a sales role advising homeowners on specifications and pricing.

Listing Coordinator — Licensed Realtor
Full Sail Real Estate — Keller Williams Realty Boise | *September 2016 – May 2018*

- Coordinated transactions end to end, managing documentation, compliance deadlines, and communication among agents, lenders, title companies, and clients.
- Ran property management operations for a rental portfolio and directed marketing content production.

Realtor / Assistant
Dave Kallas & Associates — Boise, Idaho | *March 2014 – September 2016*

- Trained eight assistants across all aspects of the business; managed transaction coordination and file management, and administered an average of 42 rental properties.

Customer Service & Property Research
TitleOne Corporation — Boise, Idaho | *September 2011 – February 2014*

- Drafted plat maps from recorded legal descriptions, converting written specification into accurate technical output; researched and filed title information; inspected properties against legal descriptions to identify discrepancies.

Smart Home Pro
Vivint Inc. | *March 2007 – September 2011*

- Installed and serviced residential security and home automation systems during the company's early growth period.

LICENSES & CERTIFICATIONS

- **Low Voltage License** — State of Idaho
- **Vivint Technical Continuing Education** — quarterly and annual certification programs, 2020–Present
- **Formerly held:** FAA (Federal Aviation Administration) Part 107 Remote Pilot Certificate, issued 2017 · Idaho Real Estate License
